Give complete solutions to the following problems. Be sure to provide all the necessary steps to support your answers.

1. Compute the orthogonal projection of the vector  $\mathbf{u}$  onto the  $\text{col}(\mathbf{A})$  using a projection Matrix.

$$\mathbf{A} = \begin{bmatrix} 1 & 2 \\ -1 & 1 \\ 2 & 0 \\ 0 & 1 \end{bmatrix}, \quad \mathbf{u} = \begin{bmatrix} 1 \\ 2 \\ 1 \\ 1 \end{bmatrix}$$

2. consider the system of equations

$$\begin{cases} x + y = 7 \\ -x + y = 0 \\ -x + 2y = -7 \end{cases}$$

- a. Find the projection Matrix onto  $\text{Col}(\mathbf{A})$ , call it  $\mathbf{P}$ .
- b. Find the projection of  $\mathbf{b}$  onto the  $\text{col}(\mathbf{A})$
- c. Solve the system  $\mathbf{Ax} = \mathbf{Pb}$  using an rref of an augmented matrix.

- d. Find the associated normal system,  $\mathbf{Ax} = \mathbf{b}$  .
  
  - e. Give the least squares solution of the system.
  
  - f. Find the least squares vector and computes the least squares error.
3. Factor the Matrix  $\mathbf{A}$  into  $\mathbf{QR}$  in problem 2 then us the factorization to find the least squares solution.
